CAMPAIGN MIGRATION · OPTIONS FOR SACH

How should we move live campaigns to Platform B?

Every active campaign has to be in Platform B at launch. Here are four ways to get it there.

1

Manual rebuild

CMs recreate every campaign by hand.

Engineering: none

2

Export, then rebuild

We export each campaign; CMs rebuild from the file.

Engineering: low

3

Partial automation

A script moves contracts, deliverables and rates. CMs do the rest.

Engineering: medium

4

Full automation

A script moves everything and keeps it in sync until launch.

Engineering: higher

My recommendation: a short check first, so we choose on facts, not guesses.

WHY IT MATTERS

The platforms are built differently. The data still has to arrive exactly.

PLATFORM A

One shared workspace
Many briefs per project

PLATFORM B

One workspace per brand
One brief per project

1 Rates and contracts must match exactly

A wrong rate is a wrong payment. A changed contract is a weaker legal record.

2 Each brand now has a private workspace

A record filed under the wrong brand becomes a privacy issue.

3 Going manual doesn’t remove the hard part

Someone still has to match A to B. Manual just moves that work to CMs, one record at a time.

Not every field needs a match. Only the ones that protect money and contracts. The rest can travel as a read-only note. I will own the field map.

NEXT STEPS

Find out first, then choose

STEP 1 · [__] DAYS · NO BUILD

Check what Platform B can accept

STEP 2 · ONLY IF STEP 1 LOOKS PROMISING

Test one live campaign

STEP 3 · BY [DATE]

Choose an option, based on what we found

If automation isn’t practical, we stop and go with option 1 or 2, knowing why.

What I need from you

1 Approve the [__]-day check

2 Name who runs it: [name]

3 Agree a decision date: [date]
